Bug Report: PUT Removes Todo Links

Bug ID: TODO-002

Summary: PUT /todos/:id with only a title removes the todo's category and project links

Description:

PUT `/todos/:id` is documented as amending a todo with the fields in the request body. A PUT that only changes the title also deletes the todo's relationships: its category links and its project (tasksof) links are removed.

Potential impact:

Renaming a todo with PUT silently detaches it from its projects and categories. The project also loses the task, and the links have to be recreated by hand.

Steps to reproduce:

1. Create a todo: POST `/todos` with `{"title":"Submit expense report"}`.
2. Link it: POST `/todos/:id/categories` with `{"id":"2"}` and POST `/todos/:id/tasksof` with `{"id":"1"}`.
3. Send PUT `/todos/:id` with `{"title":"Submit expense report"}`.
4. Send GET `/todos/:id/categories` and GET `/todos/:id/tasksof`.

Expected result: Category 2 and project 1 are still linked to the todo.

Actual result: Both lists are empty: `{"categories":[]}` and `{"projects":[]}`.

Found in: Session 2, probes S2-19 to S2-23 (session2_log.txt).

Unit tests: TodoByIdTest: "[Expected, fails] PUT with only a title keeps the todo's links" and "[Actual] PUT with only a title removes the todo's links".
