Bug Report: PUT Resets Todo Fields

Bug ID: TODO-001

Summary: PUT /todos/:id resets description and doneStatus when not sent (docs: amend)

Description:

The documentation describes POST and PUT `/todos/:id` identically, as amending a todo using the fields provided in the request body. POST behaves this way, but PUT replaces the whole todo: every field missing from the body is reset to its default, so the description becomes empty and doneStatus becomes false.

Potential impact:

Clients that follow the documentation and send only the fields they want to change will silently lose the todo's description and its done status.

Steps to reproduce:

1. Create a todo: POST `/todos` with `{"title":"Buy groceries","doneStatus":true,"description":"milk, eggs, bread"}`.
2. Send PUT `/todos/:id` with only `{"title":"Buy groceries today"}`.
3. Send GET `/todos/:id`.

Expected result: The title is updated; the description ("milk, eggs, bread") and doneStatus (true) are unchanged.

Actual result: The title is updated, but the description is now empty and doneStatus is false.

Found in: Session 1, probes S1-15 to S1-18 (session1_log.txt).

Unit tests: TodoByIdTest: "[Expected, fails] PUT with only a title keeps the other fields" and "[Actual] PUT with only a title resets the other fields".
