Bug Report: Categories of a Missing Todo

Bug ID: TODO-004

Summary: GET/HEAD /todos/:id/categories on a missing todo returns 200 instead of 404

Description:

GET and HEAD on the categories of a todo that does not exist return 200 instead of 404. GET also returns the categories linked to other todos.

Potential impact:

Clients cannot detect a missing todo through this endpoint, HEAD cannot be used to check existence, and unrelated categories may be shown for the missing todo.

Steps to reproduce:

1. Start the application with its seed data (todo 1 is in category 1).
2. Send GET `/todos/999/categories`.
3. Send HEAD `/todos/999/categories`.

Expected result: 404 Not Found for both requests.

Actual result: GET returns 200 with `{"categories":[...]}` containing category 1; HEAD returns 200.

Found in: Session 2, probes S2-15 and S2-16 (session2_log.txt).

Unit tests: TodoCategoriesTest: "[Expected, fails] categories of a missing todo return 404", "[Actual] categories of a missing todo return 200 with other todos' categories", "[Expected, fails] HEAD on the categories of a missing todo returns 404" and "[Actual] HEAD on the categories of a missing todo returns 200".
