Bug Report: Projects of a Missing Todo

Bug ID: TODO-003

Summary: GET /todos/:id/tasksof on a missing todo returns 200 with other todos' projects

Description:

Requesting the projects of a todo that does not exist should return 404, as GET `/todos/:id` does. Instead the API returns 200 with the projects linked to other todos, repeated once per linked todo.

Potential impact:

Clients cannot tell that the todo does not exist and may display unrelated projects for it.

Steps to reproduce:

1. Start the application with its seed data (todos 1 and 2 are both tasks of project 1).
2. Send GET `/todos/999/tasksof`.

Expected result: 404 Not Found with an error message.

Actual result: 200 OK with `{"projects":[...]}` listing project 1 twice.

Found in: Session 2, probe S2-09 (session2_log.txt).

Unit tests: TodoTasksofTest: "[Expected, fails] projects of a missing todo return 404" and "[Actual] projects of a missing todo return 200 with other todos' projects".
