Bug Report: PUT Resets Project Fields and Links

Bug ID: PROJ-001

Summary: PUT /projects/:id resets omitted fields and removes task and category links.

Description:

The documentation describes POST and PUT `/projects/:id` with the same sentence: amend a project "with a body containing the fields to amend". POST behaves that way. PUT replaces the whole project instead. Every field missing from the body goes back to its default, and the project loses all of its `tasks` and `categories` links, even when the body contains every field.

Potential impact:

A client that renames a project with PUT silently loses its description, its active and completed flags, and its links to todos and categories. The todos also lose their `tasksof` link, so they no longer belong to any project.

Steps to reproduce:

1. Create a project with a title, a description and `"active": true`.
2. Link an existing todo with POST `/projects/:id/tasks`.
3. Send PUT `/projects/:id` with the body `{"title": "Renamed by PUT"}`.
4. Send GET `/projects/:id`.

Expected result: The title changes. The description, the active flag and the task link are kept.

Actual result: The description is empty, active is false and the project has no tasks.

Found in: Projects session; curl commands in `Exploratory testing scripts/Projects/projects_session.sh`, section "Behavior that differs from the documentation".

Unit tests: `putAmendsOnlyTheSuppliedFields`, `putKeepsTheTasksOfTheProject` (expected), `putResetsOmittedFieldsToTheirDefaults`, `putRemovesTheTasksOfTheProject` (actual). Expected tests are in `ProjectsDocumentedBehaviorTest`; actual tests are in `ProjectsActualBehaviorTest`.
