Bug Report: XML Link to Project Fails

Bug ID: PROJ-005

Summary: An existing todo or category cannot be linked to a project with an XML body.

Description:

The documentation says to set Content-Type to `application/xml` to send XML. POST `/projects/:id/tasks` with `<todo><id>3</id></todo>` returns 404 "Could not find thing matching value for id" although todo 3 exists. The JSON body `{"id":"3"}` succeeds. A JSON body with a numeric id, `{"id":3}`, fails the same way, which suggests the id is compared as a string and the XML value is parsed as a number. `/projects/:id/categories` has the same defect.

Potential impact:

Clients that only speak XML cannot attach existing todos or categories to a project. The 404 message points at a missing todo, which sends the developer looking for the wrong problem.

Steps to reproduce:

1. Create a todo with POST `/todos` and note its id, for example 3.
2. Send POST `/projects/1/tasks` with Content-Type `application/xml` and the body `<todo><id>3</id></todo>`.
3. Send GET `/projects/1/tasks`.

Expected result: 201, and todo 3 is listed under the tasks of project 1.

Actual result: 404 "Could not find thing matching value for id". No link is created.

Found in: Projects session; curl commands in `Exploratory testing scripts/Projects/projects_session.sh`, section "Behavior that differs from the documentation".

Unit tests: `postLinksAnExistingTodoFromAnXmlBody` (expected), `postDoesNotFindAnExistingTodoFromAnXmlBody` (actual). Expected tests are in `ProjectsDocumentedBehaviorTest`; actual tests are in `ProjectsActualBehaviorTest`.
