Bug Report: XML Category Link Fails

Bug ID: TODO-005

Summary: POST /todos/:id/categories with an XML body returns 404 for an existing category

Description:

The API accepts XML request bodies when Content-Type is application/xml; creating a todo from XML works. Linking a todo to a category with an XML body fails with 404 "Could not find thing matching value for id", although the category exists. The same request with a JSON body succeeds.

Potential impact:

Clients that use XML cannot link todos to categories.

Steps to reproduce:

1. Create a todo: POST `/todos` with `{"title":"Submit expense report"}`.
2. Send POST `/todos/:id/categories` with header `Content-Type: application/xml` and body `<category><id>1</id></category>`.
3. Send GET `/todos/:id/categories`.

Expected result: 201 Created, and category 1 is listed for the todo.

Actual result: 404 with `{"errorMessages":["Could not find thing matching value for id"]}`; no link is created.

Found in: Session 2, probe S2-17 (session2_log.txt).

Unit tests: TodoCategoriesTest: "[Expected, fails] linking with an XML body links the category" and "[Actual] linking with an XML body returns 404 and links nothing".
